## **Selbstbeschreibung der CrossAsia-Datenbank: „Encyclopedia of Chinese Language and Linguistics“:**

The Encyclopedia of Chinese Language and Linguistics offers a systematic and comprehensive overview of the languages of China and the different ways in which they are and have been studied. It provides authoritative treatment of all important aspects of the languages spoken in China, today and in the past, from many different angles, as well as the different linguistic traditions in which they have been investigated. In more than 500 articles, written by major specialists in the field, the Encyclopedia offers a synthesis of the most important research in Chinese linguistics and up-to-date bibliographical coverage. As such it is the prime reference source for information on:

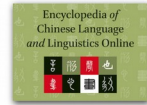

- the lexicon, syntax, and sound structure of the Sinitic and non-Sinitic languages of China, including sign languages
- the history of languages in China and their situation today
- the history of Chinese linguistics, both indigenous and Western traditions
- the sociolinguistic situation, language contact, and language variation
- psycho- and neurolinguistic studies on Chinese, including first language acquisition
- and many other aspects of Chinese and Chinese linguistics (e. g., Chinese in the diaspora, Chinese loanwords in other languages, history of lexicography, language pedagogy, etc.).
